## Legend

	LOIS : Livingston On-Line Imaging System
	LMS : Livingston Managed Services, Document management services, Contact center services
	CODA : Livingston Financial System
	ISIS : Integrated Streamline Imaging System
	Insight : Livingston customer self-service ,Insight Docs, Insight Compliance Center, Insight Imaging and Insight ISF

Storage subsystem LUNs assigned to VIOS1/2 as physical volumes, mapped to Partitions via vhost-vscsi pairs, and load balanced with MPIO and vscsi0/vscsi1 priority setting on each partition.

Failover Load-Sharing Primary/backup SEAs pairs on VIOS1/2, pinging via control channel with identical VLAN. 2 Virtual Trunk adapters on each SEA associated with different VLAN IDs, load balanced with one Trunk adapter activated on one SEA by bridging respective VLANs via 2 VIOSs through external tagged Switch ports & untagged Router ports.

 Systems in HACMP Cluster

The Power 740 server supports a maximum of 32 DDR3 DIMM slots, with eight DIMM slots included in the base configuration and 24 DIMM slots available with three optional memory riser cards. A system with three optional memory riser cards installed has a maximum memory of 1024 GB.

With industrial-strength PowerVM virtualization technology, IBM p740 delivers functions including logical partitioning technology, virtualized processors, and IEEE VLAN-compatible virtual switch, virtual SCSI adapters, virtual Fibre Channel adapters, and virtual consoles.

The **HMC** gives systems administrators a tool for planning, virtualizing, deploying, and managing IBM Power System servers for configuring logical partitions (LPARs) and dynamic resource allocation, including processor and memory settings for selected Power Systems servers

## Appendix B: CGI applications on all logic partitions

### Backup and Disaster Recovery

Use NIM server for OS backup, use Comvault backup utility for Application and DB backup, Data is synchronized to one DR partition in PDC for DR

### CommVault

The tool CGI uses to back up and restore user data. This tool is deployed as per the filled out backup forms from Livingston. The backup implementation can be reviewed and changed at any time upon request.

### BMC Patrol

The tool CGI uses to monitor the AIX environment. This tool has been deployed with CGI's standard AIX monitoring alerts. These can be reviewed and changed at any time upon request.

### Blade Logic

CGI's standard automation tool. On AIX, it is used to run security compliance scans and account mgmt scans to review logon id accounts. These are executed as "pull" jobs from the Blade Logic servers.

### MPG-Power Navigator

The tool CGI uses to produce performance and capacity reports on AIX. It uses nmon data and packages it to produce various standard and custom reports. It uses crontab to run several data gathering and file mgmt scripts between 4:25am and 5am daily, runs a file mgmt script twice a month and runs a quick script every 15 minutes to check that nmon is running.
