**RMAN back up your live database and its archive log files. Every time RMAN is used, there will be at least two sessions launched against the target database: these are known as the default session and the polling session. The default session is the session that invokes the kernelized PL/SQL (kernelized PL/SQL is PL/SQL that is available to the instance before a database has been mounted or opened) that implements RMAN; the polling session monitors the progress of RMAN operations. Whenever RMAN reads or writes a disk or tape, it will need a third session: a channel. The information used by the RMAN commands REPORT and LIST, LIST tells you about backups that have been made, whereas REPORT tells you what needs to be backed up and, the information displayed in the dynamic performance views, is drawn from the RMAN repository: data stored in the controlfile of the target database. It says nothing about reality—whether the backup files actually still exist.**

**A DELETE EXPIRED command does not delete any files; it only updates the RMAN repository. A DELETE OBSOLETE will physically delete files and update the repository accordingly.**

```
$ rman target /
RMAN> show all;
```

```

RMAN configuration parameters for database with db_unique_name CODAPROD are:

**crosscheck command queries the repository to find details of what whole backups have been made of the database, and then goes to the storage device(s) to see if the pieces do in fact exist. For pieces on disk, the disk directory is read and the file header validated; for pieces on tape, only the tape directory is read. Any pieces that no longer exist are flagged in the repository as EXPIRED.**

STATUS
-----
OPEN
```

```
SQL> ALTER DATABASE BACKUP CONTROLFILE TO TRACE;
```

This command writes a SQL script to a trace file where it can be captured and edited to reproduce the control file. View the alert log to determine the name and location of the trace file

Oracle will write the alert.log file to the directory as specified by the ACKGROUND\_DUMP\_DEST parameter. If this parameter is not set, the alert.log will be created in the ORACLE\_HOME/rdbms/trace directory

```

-- Below are two sets of SQL statements, each of which creates a new  
-- control file and uses it to open the database. The first set opens  
-- the database with the NORESETLOGS option and should be used only if  
-- the current versions of all online logs are available. The second  
-- set opens the database with the RESETLOGS option and should be used  
-- if online logs are unavailable.

-- The appropriate set of statements can be copied from the trace into  
-- a script file, edited as necessary, and executed when there is a  
-- need to re-create the control file.

-- Set #1. NORESETLOGS case

-- The following commands will create a new control file and use it  
-- to open the database.

-- Data used by Recovery Manager will be lost.

-- Additional logs may be required for media recovery of offline

-- Use this only if the current versions of all online logs are  
-- available.

-- WARNING! The current control file needs to be checked against

```

-- the datafiles to insure it contains the correct files. The
-- commands printed here may be missing log and/or data files.
-- Another report should be made after the database has been
-- successfully opened.
-- After mounting the created controlfile, the following SQL
-- statement will place the database in the appropriate
-- protection mode:
-- ALTER DATABASE SET STANDBY DATABASE TO MAXIMIZE PERFORMANCE

Ref : Support ID 1296264.1

1. Get confirmation from business
2. Shutdown http service on both web server, Chris is going to disable all the users;
3. Comment out all lii job/tasks under root/codauser/oracle account  
all production servers, codaweb1/codaweb2/codaapp1/codaapp2/codadb1/codadb2/codarpt
4. Manually run the ftp script on codaapp1 server  
/coda/codaapp1/script/ftp\_EFT.ksh  
/coda/codaapp1/script/ftp\_Cheques.ksh
5. Schedule the database backup based on when Chris completes his data migration;
6. Once backup is done, send notice to Judy
7. AR report from CGI environment once backup is done;

# START/STOP CODA SERVICES:

---

*Run following scripts to start coda service on each partition*

1. Login coda Webservers (codaweb1 and codaweb2) as codaops

```
$ su - codaops
```

An operation menu will be started automatically as:

```
*****
***                                     ***
***      CODA Environment Recycle Menu      ***
***                                     ***
*****
```

```
===== Stop Steps =====
```

```
101 => Stop CODA Web Services
```

```
===== Startup Steps =====
```

```
102 => Start CODA Web Services
```

```
=====
```

```
108 => CODA WebService Status
```

```
=====
```

```
q => Exit the menu
```

**select** 102 => Start CODA Web Services

After this menu appears again, **select** 108 => CODA WebService Status to confirm all CODA WebService processes are started.

2. Login coda application server (codaapp1\_svc) as codaops

```
$ su - codaops
```

An operation menu will be started automatically as:

```
*****
***                                     ***
***      CODA Environment Recycle Menu      ***
***                                     ***
*****
```

```
===== Stop Steps =====
```

```
201 => Stop CODA Application Server
```

```
===== Startup Steps =====
```

```
202 => Start CODA Application Server
```

```
=====
```

```
208 => CODA Application Server Status
```

```
=====
```

```
q => Exit the menu
```

```
select 202 => Start CODA Application Server
```

After this menu appears again, **select** 208 => CODA Application Server Status to confirm all CODA Application processes are started.

### 3. Login coda DB server (codadb1\_svc) as codaops

```
$ su - codaops
```

An operation menu will be started automatically as:

```
*****
***                                     ***
***      CODA Environment Recycle Menu      ***
***                                     ***
*****
```

```
=====  Stop Steps  =====
```

```
301 => Stop Oracle Database
```

```
=====  Startup Steps  =====
```

```
302 => Start Oracle Database
```

```
=====  Process Verify  =====
```

```
308 => Oracle Database Status
```

```
=====
```

```
q => Exit the menu
```

```
select 302 => Start Oracle Database
```

After this menu appears again, **select** 308 => Oracle Database Status to confirm Oracle Database is started.

# NEW CODA ON AWS

---

## For new coda maintenance on AWS,

1. **Jump host**, access instances from **Dev AD**, and
2. login a0blpcdaora01/a0blpcdawww01 to maintenance Oracle DB/HTTP application on **instance** level, and
3. monitoring instance( including start/stop instance) from **AWS console**

## Master AWS Console sign-in (if required):

Livingston currently supports 4 AWS accounts. This section will cover those accounts, and how to deploy instances into those accounts.

AWS2 is dedicated to Smartborder, and will not be covered at this time.

AWSCoda was originally setup for Coda dev work, but is being migrated into AWS3 and AWS1 where it will be decommissioned upon completion.

AWS1 and AWS3 are the focus of this section at this time.

AWS1 is considered a Livingston International datacenter supporting production work. Until now this has been the account supporting all Livingston International work in AWS. Going forward this Account should only contain UAT and Production instances that were deployed utilizing Cloud Formation, Amazon's best practices toolset for (creating, provisioning, updating and managing) a collection of related AWS resources. Anything deployed manually in this account will be removed without warning. Any items that need to be adjusted should be addressed to [awssupport@cweb.com](mailto:awssupport@cweb.com).

AWS3 is considered a Livingston International datacenter supporting development work. This account should contain any instances required for development or QA testing. Instances needed for sizing testing, development or proof of concept, can be deployed manually. All instances required for QA testing should be deployed via Cloud Formation as a sanity check prior to UAT. The more detailed requirements you provide the AWS Support team the quicker your deployment to UAT and Production will be. We are more than happy to work with you on deploying your QA and even your development environment through a Cloud Formation template.

<https://cweb.signin.aws.amazon.com/console>

Username: lchen

Password: ~~y5sPDHCmQnBp~~

**a5sPDHCmQnBb**

Also using **2-steps Authentication tool on smartphone** to get authentication code. how to install 2-step Authentication tool, please find AWS document.

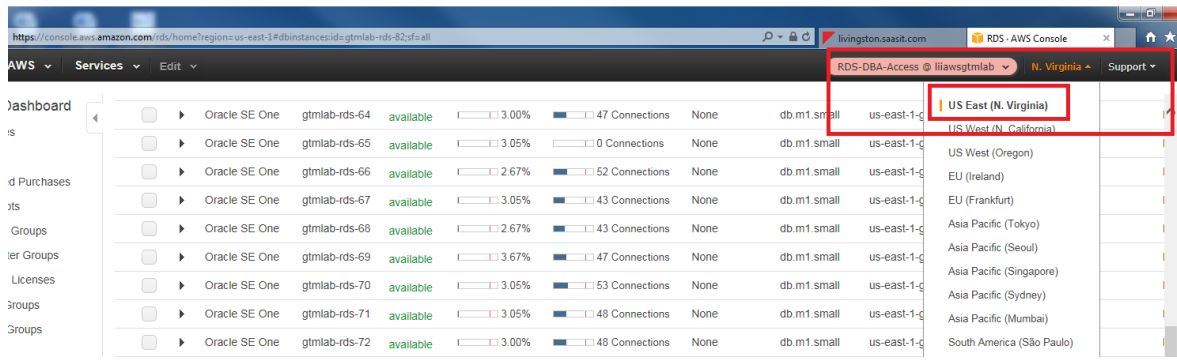

Switch to Finance Account (log in above first):

<https://signin.aws.amazon.com/switchrole?account=liiawsfinance&roleName=RDS-DBA-Access>

For Bob, AWS GTM RDS recycle:

<https://cweb.signin.aws.amazon.com/console>

<https://signin.aws.amazon.com/switchrole?account=liiawsgtm&roleName=RDS-DBA-Access>

## common Windows Remote Desktop Services environment

This section will cover the ways for Livingston International Employees and Contractors to access the AWS Environments. Livingston International supplies a Windows Remote Desktop Services environment and multiple Linux jump servers that are accessible over the Livingston International VPN or in some cases over the Internet. Our common **Windows Remote Desktop Services environment** can be access via <https://rdpbrk-east.liiaws.net/RDWeb>. Our common linux jump servers are currently only available via VPN at a0almfjmp10.dev.liiaws.net and a0elminfjmp10.dev.liiaws.net. Additional linux jump servers are stood up on a case by case basis.

<https://rdpduobrk-east.liiaws.net/RDWeb/>

User: dev-lii\lchen

passwords for both the AWS console as well as dev-lii, please see below:

### Dev AD:

Username: Dev-lii\lchen

Password: c6uNacethAf!

Also need open **Duo tool** on Smartphone to get access approval(**twice**), how to setup account on Duo, please find AWS document

Dev AD: <https://rdpduobrk-east.liiaws.net/RDWeb/>

Username: Dev-lii\lchen

##Password: [REDACTED]

Also need open Duo tool on Smartphone to get access approval(twice), how to setup account on Duo, please find AWS document

Username: lchen

Password: REMus-j65hE

in this windows Remote Desktop Services environment, we can login/access jump servers(Linux) using ssh tool , then we can access EC2 and RDS instances from these Linux jump servers, there is no need of VPN connection to Livingston.

1. ssh -v [lchen@a0alptcajmp01.dev.liiaws.net](#)  
-- need remote desktop service to access it(using password and/or keyfile), if you are using VPN, then you do not need this jump server to access code EC2 instances on AWS, just ssh these EC2 instances directly from you laptop.
2. ssh -v [lchen@a0aldgtmjmp00.gtmlab.liiaws.net](#)  
-- for gtmlab RDS instances on AWS, need password and Duo cell phone to accept access, this can be accessed from internet directly without VPN connection and/or without this remote desktop services

Username: lchen

Password:

Jump Host sign-in (required if only internet access), if you are in Livingston office, just login/access these jump servers directly

Please use my favorite ssh tool Bitvise SSH, it's free

## Access EM

```
[oracle@CODAPROddb ~]$ emctl status dbconsole
```

```
Oracle Enterprise Manager 11g Database Control Release 11.2.0.4.0  
Copyright (c) 1996, 2013 Oracle Corporation. All rights reserved.  
https://a0blpcdaora01.lii01.livun.com:5501/em/console/aboutApplication  
Oracle Enterprise Manager 11g is running.
```

```
-----  
Logs are generated in directory  
/u01/app/oracle/product/11.2.0/dbhome_2/a0blpcdaora01.lii01.livun.com_CODA/sysman/log
```

<https://a0blpcdaora01.lii01.livun.com:5501/em/console/logon/logon>

## AWS Instance management(reboot RDS)

(access AWS from internet, not from VPN to Livingston intranet)

### step 1: login URL:

<https://cweb.signin.aws.amazon.com/console>

Username: lchen

[REDACTED]

##a5sPDHCmQnBb

#qwerPOIU1234

#try username: lchen@cweb [REDACTED] if not successful

### Step 2: Switch User Role

=====

For Coda, Switch to Finance Account role(log in above first), just copy following string to Web browser URL:

<https://signin.aws.amazon.com/switchrole?account=liiawsfinance&roleName=RDS-DBA-Access>

=====

For Bob, Switch to AWS GTM RDS recycle role: just copy following string to Web browser URL:

<https://signin.aws.amazon.com/switchrole?account=liiawsgtmlab&roleName=RDS-DBA-Access>

### RDS#

Switch to Finance Account (log in above first):

<https://signin.aws.amazon.com/switchrole?account=liiawsfinance&roleName=RDS-DBA-Access>

For Bob, AWS GTM RDS recycle:

<https://signin.aws.amazon.com/switchrole?account=liiawsgtmlab&roleName=RDS-DBA-Access>

##a5sPDHCmQnBb

#qwerPOIU1234

For Bob, Access RDS Instance,

ssh -v lchen@a0alptcajmp01.dev.liiaws.net  
ssh -v lchen@a0aldgtmjmp00.gtmlab.liiaws.net  
accept access

--need only password and/or keyfile  
--need password and Duo cell phone to

Username: lchen

[REDACTED]

=====

Dev AD:

<https://rdpduobrk-east.liiaws.net/RDWeb/>

Username: Dev-lii\lchen  
[REDACTED]  
[REDACTED]

Also need open Duo tool on Smartphone to get access approval(twice), how to setup account on Duo, please find AWS document

```
ssh -v lchen@a0alptcajmp01.dev.liiaws.net      --need only password and/or keyfile
ssh -v lchen@a0aldgtmjmp00.gtmlab.liiaws.net   --need password and Duo cell phone to
accept access
```

Username: lchen  
[REDACTED]

Autopushing login request to phone...
